If a person is **fully vaccinated** for COVID-19, then they are not required to wear a face covering indoors.

A person being **fully vaccinated** is defined as: being two weeks past the final inoculation of an approved COVID-19 vaccine.

Which means either 2 weeks after a person's second dose in a 2-dose series, such as the Pfizer or Moderna vaccines or 2 weeks after a single-dose vaccine, such as Johnson & Johnson's vaccine.

If a person is fully vaccinated, they can still wear masks on the premises of places to feel personally safer and more comfortable, and are still encouraged to do so since there are still active COVID-19 positives cases in the State.
